2 Configuration software for AS-Interface safety monitor. 3 Configuration software for AS-Interface safety monitor. The need for a graphical user interface (GUI) in the interactive input and output device door control system resulted in the design of a simple graphical user interface. The function of the interface is to visualize the status of the interface panel. The interface panel is a graphical representation of the status of all interface outputs. The interface is generally used to operate the interface panel or interface components. 4 Configuration software for AS-Interface safety monitor. The function of the interface is to visualize the status of the interface panel. The interface is generally used to operate the interface panel or interface components. The name of the control software is "AS-Monitor". To enable the user to view all output switches, the software may be connected to an AS-Interface safety monitor cabinet. In order to operate the interface panel, the user enters the exact combination of the output buttons shown on the interface. The right-left direction of the interface panel does not represent the forward direction of the buttons. 5 Configuration software for AS-Interface safety monitor. The name of the control software is "AS-Monitor". To enable the user to view all output switches, the software may be connected to an AS-Interface safety monitor cabinet. In order to operate the interface panel, the user enters the exact combination of the output buttons shown on the interface. The right-left direction of the interface panel does not represent the forward direction of the buttons. This software controls: 1.
